

DESIGN AND PERFORMANCES...

SWISS MADE 

...TO BE DISCOVERED

*THE INVENTOR  
OF COMPRESSED  
AIR PISTOL*

*What is now produced by all pistol manufacturers and used by more and more increasing number of shooters, is the result of a successful project presented worldwide the first time in 1992 by Morini Competition Arm S.A. the compressed air pistol CM 162E.*

*The model uses exclusively compressed air, has an electronic trigger and ball bearing trigger unit system. The excellent results shown at Olympic Games, World Championships, World Cups, European and National Championships are the proof of a good project and a good product.*

*One of the world's legendary shooter Ragnar Skanaker from Sweden, actively took part in the project. The cooperation with Skanaker also brought further fruits and, in 1993, the CM 84E free pistol was born, spotting an electronic trigger, ball bearing system and a sensor which detects the finger's presence inside the trigger guard. Ragnar Skanaker was the first international shooter using the prototypes of CM 162E and CM 84E at international competitions and won several World Cups.*

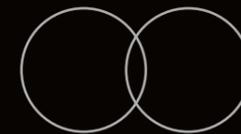

*Ragnar Skanaker*

### MORINI CM200 EI

The Morini CM200EI is an Air Pistol that incarnates the features of the CM84E free pistol, bringing them into the world of air pistols. The CM200EI is designed to replicate the feel and performance of the CM84E, making it ideal for shooters competing in both categories. Since its introduction in 2018, the CM200EI has proven its worth by attracting the attention of international shooters who want to have the CM84E trigger on an air pistol.

### MORINI CM84E CARBON

The Morini CM84E is designed to excel in free pistol competitions, where millimetric precision is crucial. The combination of a flawless electronic trigger, an ergonomic grip, and high-quality construction makes this pistol the ideal weapon for shooters aiming for top performance.

**Advantages of the use of the carbon fiber on the pistol:** the shot is more precise, the carbon fiber has the property to absorb the vibrations of the shots, reduces the recoil.

### ACCESSORIES

Find the ideal accessory to enhance the performance and experience of your Morini pistol. Whether you own an air pistol, a sport pistol, or a free pistol, we offer a selection of accessories specifically designed to match the precision, reliability, and craftsmanship of Morini products.

### WOOD GRIPS

Morini's first grips with anatomical design were considered to be of paramount importance. From the beginning, at Morini's factory, the grip was seen as the interface between Pistol and Shooter and therefore a very important element of harmony. Walnut wood allows us to create the grips that are now the most famous in the world.

162410T - BARREL WEIGHT 60 g

**TRADITIONAL SWISS PRECISION**

1973

Morini Competition Arm SA has been established in Italy in 1973 as an anatomical grip maker factory for sport pistols. From the beginning, at Morini's factory, the grip was seen as the interface between gun and shooter and therefore a very important element of harmony.

1985

With its spirit of continuing innovation Morini Competition Arm SA started in 1985 producing the model CM 102E, the first sport pistol in the world with an electronic trigger.

1990

Innovative designing continued and the CM 162E was born.

1992

When all 4.5 mm (0.177) used either air that had to be precompressed by a piston or CO<sub>2</sub>, Morini Competition Arm SA manufactured the first compressed air pistol with a 200 bar compressed air cylinder and electronic trigger unit with ball bearing.

1993

The cooperation with Skanaker also brought further fruits and, in 1993, the CM 84E free pistol was born, sporting an electronic trigger unit with ball bearing and a sensor which detects the finger's presence inside the trigger guard.

1995

First air pistol equipped with analogic manometer on 200 bar compressed air cylinder.

1997

The model CM 162MI was born.

1999

The semiautos CM 22M, CM 22M-RF and CM 32M for Standard, Rapid Fire and Centre Fire disciplines were born.

2000

The Chinese Tao Luna won the Olympic Games in Sydney with the air pistol CM 162E1. Till date, competitions at all levels have been won using Morini pistols: Olympics, World Championship, World Cups, European Championships, and, of course, Nationals in various countries.

2001-2009

During this period of time Morini made technical improvements to the weapons and grips thanks to the suggestions from the world's best shooters.

2010

First air pistol equipped with digital manometer on 200 bar compressed air cylinder.

2014

After 34 years the Korean Shooter Jin Jong-oh broke with 583 points the world record in 50m Pistol Men with his CM 84E Free Pistol.

2016

Introduction of the technique and the use of carbon fiber.

2018

Morini presents the new CM200E1, an air pistol that reincarnates the Free Pistol. The new CM200E1 is an improvement of our traditional technique.

2021

Morini has developed a new electronic board for the CM200E1, equipped with Bluetooth connectivity, an advanced ARM Cortex processor, and integrated gyroscope and accelerometer. Alongside this innovation, Morini has also released its first smartphone application, allowing you to connect directly to the CM200E1.

2023

Morini has also upgraded the electronic boards of the CM162E1 and CM84E models, making them compatible with the Morini smartphone application for enhanced connectivity and training features.
